

Refurbishment, Marie Curie Hospice

Client

Marie Curie Cancer Care

Description

The improved facilities maximize the independence, dignity and comfort of patients including 26 new ensuite single bedrooms. Windows were replaced with composite units to address problems of heat gain and poor insulation while improving light and ventilation.

Innovations & Added Value

It was a requirement that the hospice continued to function throughout the project in order to maintain a service to patients. Consideration of the patient experience is paramount in hospice care, which was challenging for such extensive works.
