

# Design Standards Report, The Royal Marsden Hospital

## Client

The Royal Marsden Hospital

## Description

The driver for the study was the fast-track refurbishment programme at the hospital. Speed of procurement required progress in parallel and ahead of the usual cost-planning and approvals process. Control of expenditure and quality were at risk. Many projects involved several practices and user groups jeopardising coherence in approach and expectations.

## Innovations & Added Value

Issues included NHS guidance on room areas, corporate image, coherent appearance, disabled access, colour scheme way-finding, cleanability and control of infection.

## Status
