

Renal, Charing Cross Hospital

Client

Charing Cross Hospital

Description

Tangram Architects Ltd. were appointed by the Trust to provide design, co-ordination and contract administration services within the Charing Cross Hospital Renal Expansion project. The project provides 7 chair and 3 bed dialysis spaces within a new dialysis treatment area together with new waiting and support spaces in a location adjacent to the existing renal department. The project also provides a new staff changing and rest suite and relocates the renal workshop within 2 new areas at first floor and basement levels within the hospital site.

The new dialysis area is set within an existing fire damaged ward which is made good and secondary glazing added to windows to remedy overheating during Summer and to combat cold and draughts during the Winter months. Specialist dialysis trunking and drainage to serve the new dialysis chair and bed spaces is added and a Trust artist was engaged to provide wall murals.
