

# Paediatric And Ward Block, Colchester Hospital

## Client

Colchester Hospital University Foundation NHS Trust

## Description

The new building is an extension to the existing hospital and provides Paediatric Outpatients, Day Care Unit, Paediatric Ward, Elective Care Centre and a Surgical Ward.

## Innovations & Added Value

A key feature of the design was an unconventional layout for the four bed bays which provides a window to each bed space and results in the deep articulation of the facades. The urgent timescales required the use of modular buildings. Based on Tangram's design, the new building is being procured through Yorkon as Principle Supplier.
